IT'S LIKE HAVING A 30,000 MILE EXTENSION CORD

WEBRelay™
WEB-CONTROLLED RELAY

INSTANT WEB CONTROL

If you need a simple solution to monitor and control devices over a network, with rock solid performance, THIS IS IT!

WebRelay™ is an electro-mechanical relay with a built in web server. It can be controlled via the Internet or a local intranet.

With WebRelay™ you can control anything from lights in a home, to pumps and motors in a factory (and everything in between). WebRelay™ has an optically isolated input that can be used to monitor the state of devices, control the local relay, or control a remote relay somewhere else on the network. This feature is useful to extend the output of a PLC to another building or to allow a switch to control a device in another state.

Features:
No programming required

Control using a standard web browser, text-based XML page, or Modbus/TCP

Use two WebRelay™ devices for control without a computer

Web browser based configuration, automatically builds a control web page

Password protected

12Amp, 125V relay contacts

Optically-isolated input

*Small package, completely self contained*

Removable terminal connectors for simple wiring (included)

Optional Power Over Ethernet (802.3af) models available. Eliminates the need for a local power supply
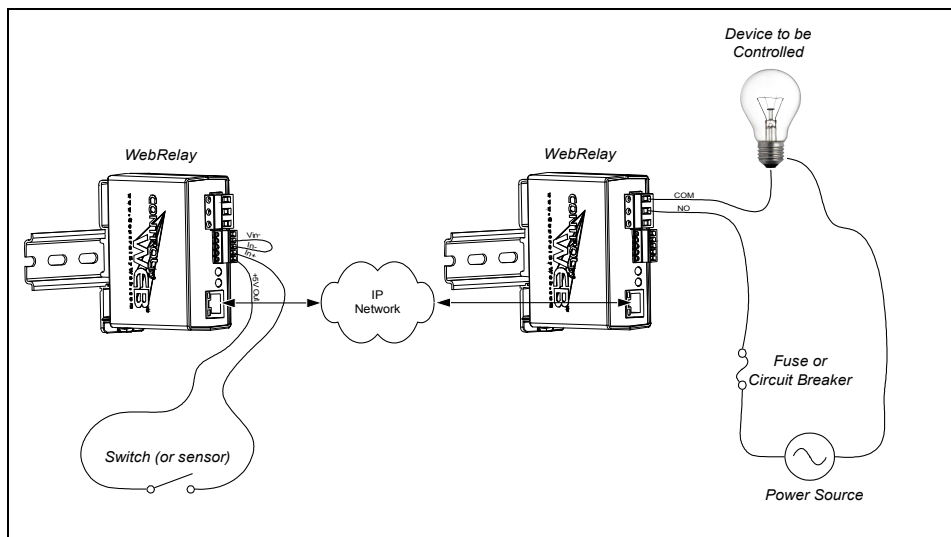

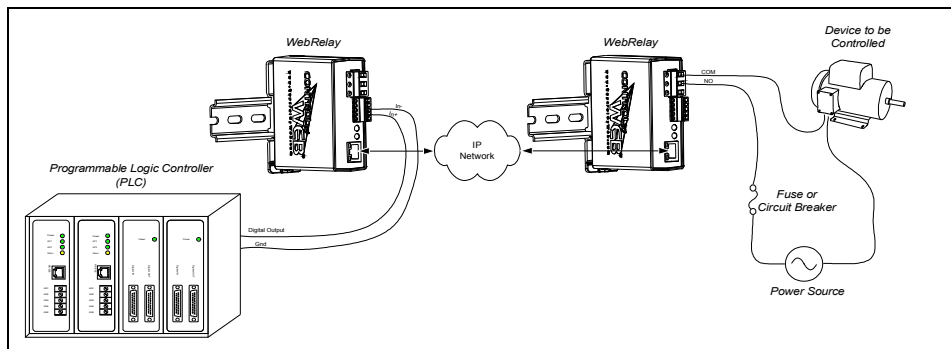

Single WebRelay™ unit. The Web browser controls the motor on the right.

Dual WebRelay™ units. The switch on the left controls the lamp on the right.

Dual WebRelay™ units. The PLC on the left controls the motor on the right.
